WERRA 2060: Integrated Modernisation

Do you know about WERRA 2060? It modernises operations with dry backfill and secondary mining to stabilise cavities and increase yield, targets a 50% CO₂ reduction at key sites, and lowers saline wastewater. The programme mobilises € 600 M, with expected payback in less than 10 years, and builds a more sustainable product portfolio aimed at climate-conscious market, supported by structured social dialogue to secure jobs and manage workforce transition.

Our friends from Euromines and @industriALL have just released research filled with best practice case studies like this one.

SSMA 2030: People-centric approach

Andalusia's SSMA 2030 powers a new phase of responsible growth: more efficient and electrified operations, lower carbon footprint, and advanced safety measures,

designed to create local value and trust. Delivery is anchored in social dialogue—industry partners lead implementation through a working group with 2 employer and 2 union representative. Thus, progress is shared by workers, companies, and communities.

Our friends from Euromines and @industriALL have just released research filled with best practice case studies like this one.

LinkedIn****Dual Vocational Training in Spain - get paid while learning**

Since 2012, Spain's DVT system links classrooms with mine sites so learners gain real experience, real mentors, real credentials. Programs cover geology, mineral processing, environmental rules and safety, internships in extractive industries, a direct path into stable, skilled jobs. It's a partnership between educators, companies, public authorities, trade unions and employer groups designed to reduce drop-out, raise qualifications and connect more people to quality work in our sector.
